

ACT #43 Name Entry

Start Assignment

Due No Due Date **Points** 20 **Submitting** a file upload **File Types** js

SOFT DEADLINE: 12/11/2023 10:45 AM

HARD DEADLINE: 12/11/2023 10:50 AM

Instruction

Create a simply name entry prompt that updates the page content.

Tools

JavaScript, jQuery, HTML, Visual Studio Code

Description

- Download the following file: [NAME.zip \(https://kodego.instructure.com/courses/379/files/76667?wrap=1\)](https://kodego.instructure.com/courses/379/files/76667?wrap=1) [↓ \(https://kodego.instructure.com/courses/379/files/76667/download?download_frd=1\)](https://kodego.instructure.com/courses/379/files/76667/download?download_frd=1)
- Unzip the file.
- Create a new Javascript file. Name it **change_name.js** and place it in the js folder where you extracted the .zip file.

- This would be automatically linked to the index.html file, assuming that you named the file correctly and place it in the correct folder.
- You are **not** allowed to edit the index.html in any way (it is not needed). You can, however, open and read it.
- Focus on this Javascript file! You do not need to check out the other files, other than index.html.
- Create an JavaScript function that triggers when you **click** on the **Change name button**.
 - Upon clicking the button, a prompt would ask the user for their name.
 - After entering the name, all instances of **Daiben** on the HTML document would be replaced by the entered name.
 - There are only two instances of Daiben.
- Submit the change_name.js file **only** here.
